

ITEC630 - Information Technology Masters Project Part A (Project Management)
Class Tutorial Activity #1

Activity 1: (20 Minutes)

Instructions:

1. From the lecture slide, read the following prompt:

"Project management is crucial in IT because projects often face uncertainty, rapid technology changes, and high stakeholder expectations. Consider a recent IT project you've been involved in or observed. What challenges did it face? How were they addressed (or not)?"

2. Discussion:

- In small groups (3-4 students), discuss the prompt for 10 minutes.
- Appoint one group member to note the key challenges and solutions discussed.

3. Discussion Share:

Each group selects one key challenge to share with the class (limit 1 minute per group).

Activity 2: Case Study – SwiftPay Solutions – (60 Minutes)

Case Study Overview: A leading fintech startup specialising in digital payments and secure transactions.

Context:

SwiftPay Solutions has recently secured funding to develop a mobile payment app called SwiftWallet, aimed at providing seamless peer-to-peer transactions, bill payments, and financial tracking. The app must comply with financial regulations and offer high security, real-time processing, and user-friendly features.

However, the project faces three major challenges:

- 1. Fixed Budget:** The funding is limited, and there is no room for overspending.
- 2. Tight Deadline:** The launch must happen in six months to stay ahead of competitors.
- 3. Evolving Requirements:** Stakeholders, including investors and early testers, are frequently suggesting new features and changes.

Your Task:

As the Project Manager, you need to decide how to handle these challenges effectively.

- 1. Identify Constraints:** List the key constraints (scope, time, cost) and suggest one additional constraint (e.g., quality, risk, or regulatory compliance).
- 2. Choose an Approach:** Considering the evolving requirements, would you use a predictive (waterfall) or adaptive (agile) project management approach? Justify your choice.
- 3. Plan a Strategy:** Outline two key strategies to manage the constraints and ensure successful project completion.
